

Setup with Mail.app for iOS

Set up your new e-mail account as follows for devices with the iOS operating system (iPad, iPhone):

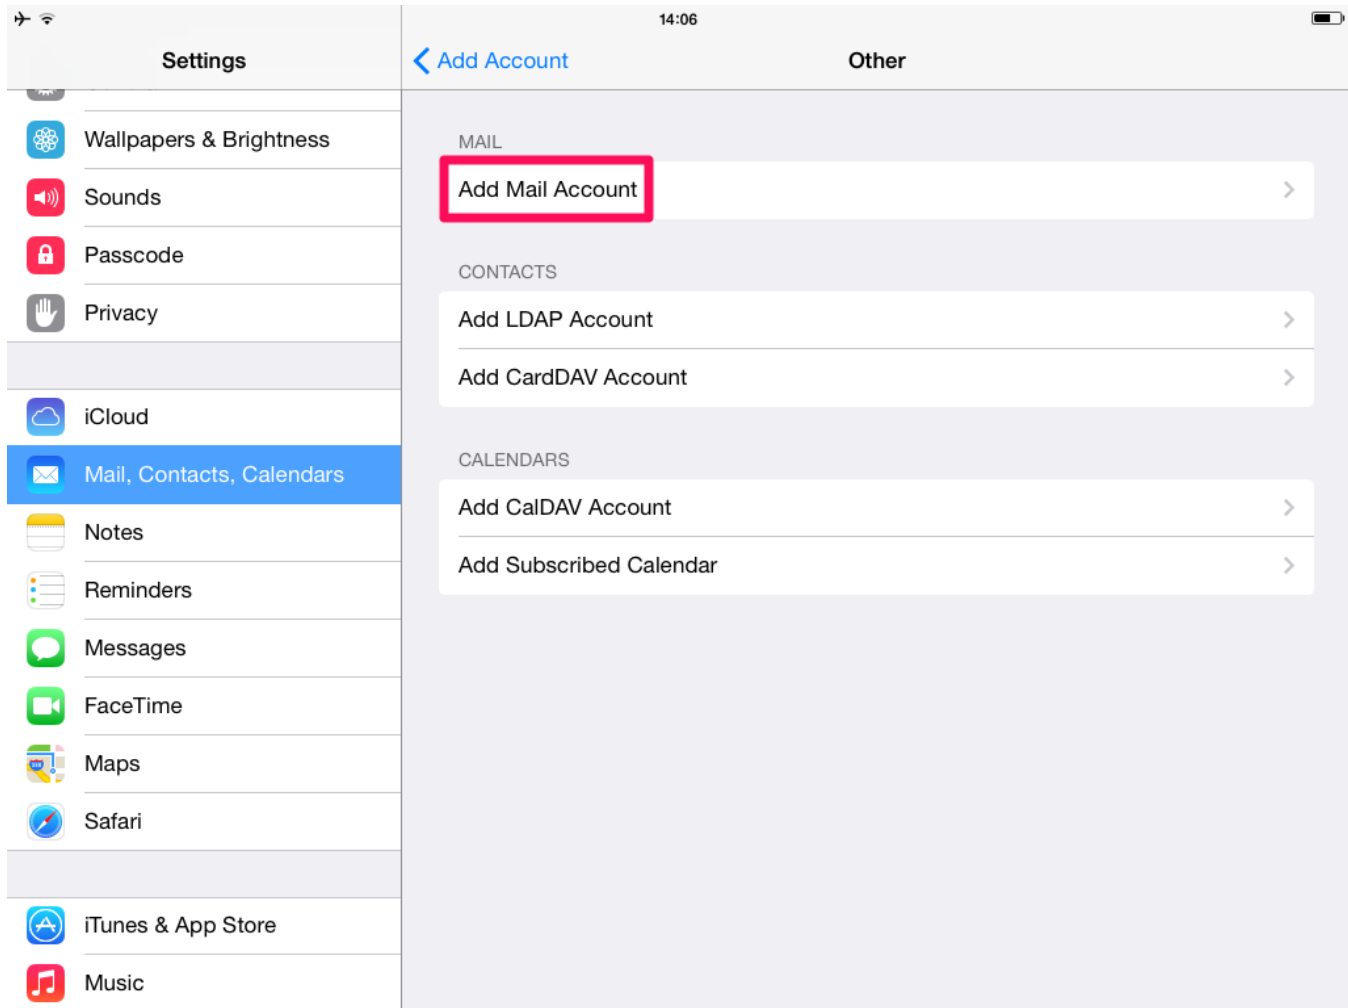

Open '**Settings -> Mail, Contacts, Calendar -> Add account**'. The next few steps are explained in the image gallery.

You do not normally have to enter settings such as port and connection security extension yourself. The e-mail program automatically selects and implements the most secure methods (and we only support these methods). For the sake of completeness, we have listed the necessary information here.

- **Name:** Your name
- **E-mail:** Your mailbox.org e-mail address
- **Password:** Your mailbox.org password

- **Server for incoming e-mails:** **imap.mailbox.org**
- **User name** (same as login): Complete e-mail address
- **Password:** Your mailbox.org password
 - Port **993** with connection security extension **SSL**
 - Authentication method: Normal password

- **Server for outgoing e-mails:** **smtp.mailbox.org**
- **Password:** Your mailbox.org password
- **User name** (same as login): Complete e-mail address
 - Port **465** with connection security extension **SSL**
 - **Under iOS 12.4 and higher use Port 587 with connection security extension SSL**
 - Authentication method: Normal password
