

# My recipient does not use PGP

If the automatic search for valid PGP keys does not yield any positive results, a green symbol will appear next to the recipient address, indicating that this person is a new Guard user.

bernhard.lehmann@mailbox.org   DANE ok x

This means your recipient will receive a free, temporary Guard mailbox on our server and your message will be transmitted to this mailbox, fully encrypted. The recipient will then receive a notification with a web link to a login form: and another e-mail containing the password for logging in.

## You have received a secure mailbox.org Guard email

Please click the button below to read the secure mailbox.org Guard email:

[READ MESSAGE](#)

If this does not work you can copy and paste the link below into your browser.

## Welcome to mailbox.org Guard

You have received this email because Robert Meier has sent you a secure email message with mailbox.org Guard. You will receive a link to the secure message in a separate email. Robert Meier added a personalized message to this invite:

The message contains private content. Please use the mailbox.org Guard to read it.

mailbox.org Guard created the following temporary password in order for you to access the secure email message:

For extra security you will be asked to change your temporary password once you access your secure email message for the first time.

qHsJlqEL0s

## Secure access with an optional PIN

Since the e-mail with the password will be transmitted without encryption, it is possible for someone else to capture this information.

For this reason, you should always secure access to the temporary mailbox with an additional PIN. This PIN will not be sent automatically to your recipient, but to you, the sender. You can then choose an appropriate way to let your communication partner know about the PIN, for instance by phone, text, messenger, or in person.

## Security PIN

The new recipients listed below will be sent a password via email.  
You can also require a separate pin, which is displayed below

**9654**

You may deliver this pin any way you see fit, but we recommend doing it in a second method other than email (Phone, SMS, Skype, etc)

If you want this extra pin requirement, click OK

Recipients:

bernahrd.lehmann@mailbox.org

Skip

OK

Handing over the PIN is something that needs to be done only once, and thus presents relatively little effort for considerable security gain. Exchanging any number of encrypted e-mails is convenient and easy to do once your communication partner has received the PIN.
